

PROBLEM SOLVER

Many Customers Have Experienced The Following:

PROBLEM:

Ordinary Tarp Straps

- Wear and tear easily
- Lose their stretch after limited use and at low temperatures
- Deteriorate quickly when exposed to sunlight, ozone, salt air and chemicals
- Leave unsightly black scuff marks

SOLUTION:

Urethane Rope and Shock Cords

- Resists wear and tearing better than rubber or plastic cords and rope
- Always returns to original length, regardless of how many times it's used
- Resists the effects of sunlight, ozone, salt air and most chemicals – even after three years exposure in field tests, showed little or no deterioration
- Leaves no black scuff marks
- Nylon/fiberglass hooks are non-marring and will not rust
- Retains elasticity even at low temperatures

“Let me show you how it works”

Cut rope one-third shorter than the finished length

Attach adjustable hooks

Assembled products are ready to use

FEATURES:

- Urethane construction
 - Abrasion-resistant
 - Resistant to chemicals, oil, sunlight, salt water and ozone
 - Will not scuff
 - Remains flexible to -40°F (-40°C)
- Variety of styles
 - Straps with stainless steel hooks
 - Cords with molded nylon hooks
 - Rope with adjustable fiberglass hooks

APPLICATIONS:

- Truck and fleet
- Boats and trailers
- RVs
- Farms and ranches
